- Agriculture
- Cement
- Chemicals
- Construction
- Foodstuffs
- Hazardous waste
- Minerals
- Pharmaceuticals
- Plastics
- Recycling
- Refractory
- Rubber goods
- UN & DOT APPROVED

TEN REASONS TO USE BULK CONTAINERS:

1. It significantly improves labor force efficiency.
2. It eliminates the need to handle, slit and dispose of 50 or 100-pound bags.
3. It ends the pre-assembly work, which is required with most rigid or corrugated containers.
4. It avoids wood pallet usage.
5. The discharge of product is done with no dust or air contamination.
6. It saves storage space because the semi-bulk containers are totally collapsible.
7. It cuts costs because bulk bag containers are the least expensive means of packaging and transporting bulk products.
8. It reduces the cost per unit use because most semi-bulk containers can be used repeatedly.
9. It protects your product and ensures its safe storage and shipping. The tough industrial fabrics used in these containers give better security than multi-wall bags, corrugated or most other rigid containers.
10. It does away with any special handling equipment. A forklift does all the work.

BENEFITS OF FIBC'S

When the customer receives a bulk bag filled with a product, it is easily picked off the truck or trailer, fork lifted or conveyed to exactly where it is needed, and then quickly emptied when and where desired. Many users empty directly into processing equipment. Customers use the FIBC's for shipping, storing and dispensing products. The application list is endless. Standard or special spouts can be made to order to ensure quick, no-spill filling or discharge of contents.

CUSTOMER SAVINGS

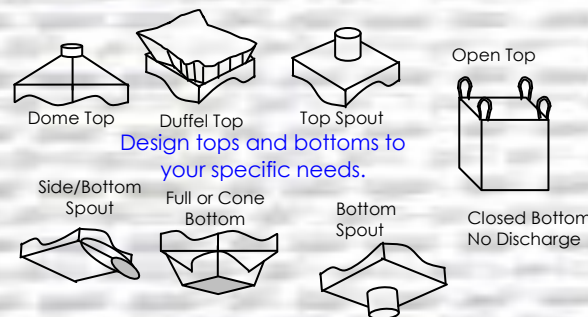

A Flexible Intermediate Bulk Container can be used for almost any dry, flowable material. It can be handled, shipped and stored at a lower cost than current methods. This cost savings includes paper or jute bags, steel or aluminum containers, covered bins, or truckloads. The factors of reusability and extensive labor savings are also cost considerations over the other products currently on the market. Unlike throwaway or limited-wear packages, bulk containers may be used repeatedly, depending on handling and products carried.

Add a variety of straps, sleeves and liners to aid in moving and handling a variety of products.

TEST SET-UP

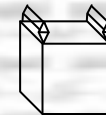

UN Certified FIBCs must withstand an internal load of six times the maximum permissible net mass (safe working load).

Strap Variations

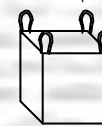

8 Point

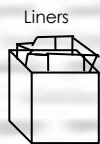

Sleeves

Lift Straps

Crane Loops

Liners

Liners of polyethylene and polypropylene can be installed for special products.

Strong, Economical and Designed to fit your needs.
